Managed Secure Access

Connect to Internet, Cloud, and Apps without compromising security or visibility

Increase security alignment with the business

Today, businesses are looking for means to securely adopt new technologies and modern ways of working without compromising security, visibility, and end user experience.

However, putting more point solutions is increasing complexity, driving operational costs up, and hindering the expected agility to respond to the evolving business needs in order to be successful.

Therefore, a new approach is clearly needed.

What you should have:

Consistently enforced protection policies

- Across all users
- On any device
- All the time
- At any location

A fully cloud-delivered security platform allowing

- Hybrid deployments
- Improved agility
- High ROI

Integration with a wide range of SD WAN solutions

- Allowing organizations to adopt a future proof strategy towards Secure Access Service Edge - SASE

What we offer:

Accelerate SASE Transformation
Hybrid deployment helps you accelerate your transformation projects while maintaining a high ROI.

Future Proof
The different service levels and the integrations with other Orange Cyberdefense capabilities allows you to customize the service based on your current and future needs.

Various management options
Co management gives you 24x7 real time visibility & control on the different aspects of the service.

Intelligence-led security
We invest heavily in threat R&D to protect you against emerging threats.

Business Challenges

- Increased complexity due to multiple point solutions with no/little integration among them
- Inconsistent policy enforcement, and the challenge to extend protection policies to cover all types of access (Internet, Cloud, Business Apps).
- Lack of resources to staff a Security Operations Center (SOC) 24x7
- Lack of visibility on end-user digital experience

What will you get?

- Fully managed platform
- Integration with Orange Cyberdefense Threat Intelligence
- Designated Security Manager
- Monthly strategic reporting

When should you consider it?

- When you want to consolidate visibility and policy enforcement across all your access types.
- When you require a provider who you can partner with
- When you have invested in Palo Alto Networks appliances in the past and want to extend your access policies to the cloud, and private apps.
