Managed SOAR Services

Accelerate your security operations with scalable and automated workflows

Your challenges today

There are too many alerts which are causing a real fatigue for security analysts. Furthermore, there is an overwhelming amount of security products which have to be mastered to perform an investigation which requires extensive manual tasks and repetitive actions. Meanwhile, businesses are pressured to be able to react to malicious cyber threats quickly and effectively, without the necessary resources.

Why implement SOAR?

Agility: in a unified interface, it allows you to trigger actions on security technologies which are not talking with each other, without having to spend time to work on connectors.

Time saving: accelerate triage alerts and response time thanks to automatic processing of known attacks. This way, you can focus on real impacting projects.

more gain

more agility   faster response time   better service

less pain

less alerts to process   less admin tasks   peace of mind through MSSP
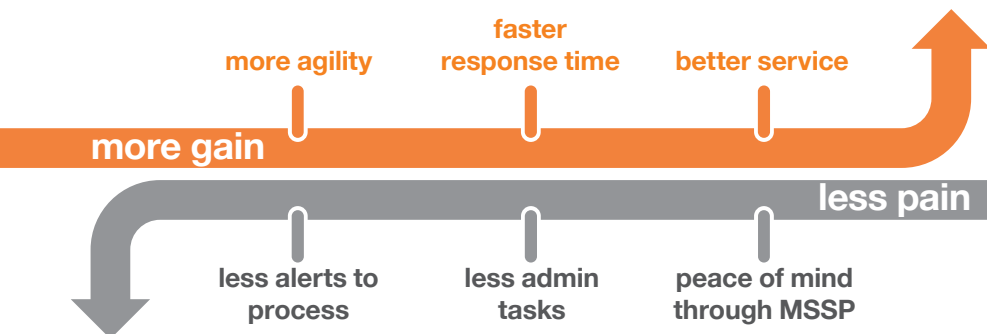

Key figures:

5x

increased efficiency in relation to automation of routine tasks.

2x

improved productivity linked to analysts now able to focus on business impacting activity.

Top priority

Orchestration and automation are top priorities for the cybersecurity leadership

Source: Forecast Analysis: SOAR, Worldwide − Gartner − 2021

What we offer:

A comprehensive range of services from design integration to full management with SLA, delivered by our experts.

A leading SOAR technology from our Palo Alto Networks partner available for dedicated, managed or co-managed operating models.

A use case factory handling custom dashboards, connectors and playbook development.
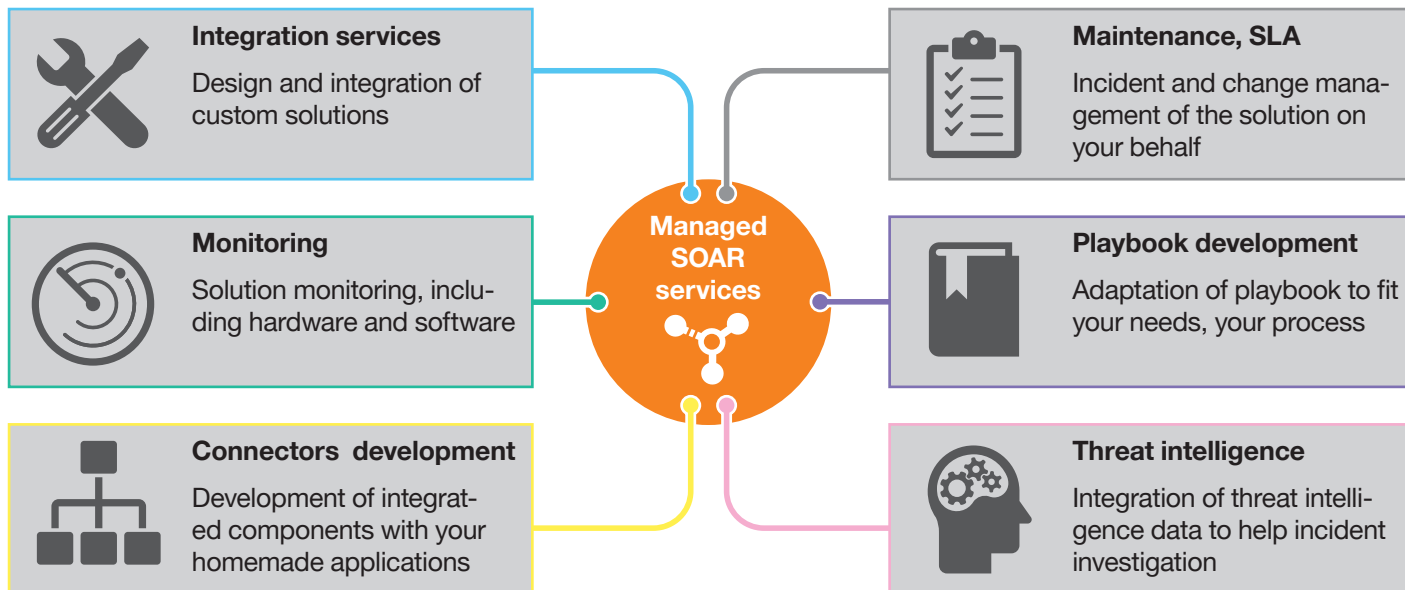

2 500 experts in cyberdefense close to you, worldwide

Highest Palo Alto Networks certification level

10 years experience in automation and playbooks designed for your needs

A comprehensive service to stay protected and respond to incidents quickly and efficiently.

Our service is covering the complete customer journey to automation and orchestration providing integration services, maintenance, monitoring, playbook development, full management and threat intelligence service.

Integration services
Design and integration of custom solutions

Maintenance, SLA
Incident and change management of the solution on your behalf

Monitoring
Solution monitoring, including hardware and software

Managed SOAR services

Playbook development
Adaptation of playbook to fit your needs, your process

Connectors development
Development of integrated components with your homemade applications

Threat intelligence
Integration of threat intelligence data to help incident investigation

Service levels catering to your needs

Your needs	Operating model
You are a large organization, requiring full control over the solution and a high level of expertise	Dedicated
You need experts helping you manage the solution	Co-managed
You have limited security staff and need peace of mind	Managed

Why Orange Cyberdefense?

- 2 500 experts worldwide and in a location near you
- Ranked as a Strong Performer in The Forrester Wave™: European (MSSPs), Q3 2020
- Profit from permanent updates and improvements in the Use Case Factory
- Intelligence-led security: we invest heavily in R&D to detect and respond to the latest tactics, techniques and procedures.
- Palo Alto Cortex expertise certified elite, CPSP, ASC and Partner of the Year
