

OT Security Assessment

[Design]

Enhance your OT security posture with a robust and resilient security architecture design.

Transparency of your OT security posture

The digital transformation enables business to uncover tremendous new business potentials and to be future-proof - but it also means an interconnection of networks, which from a security perspective have not been designed for it. For many security teams this means that they need to build a security program for an environment which is unknown to them.

Securing the digital transformation of your business means to be able to understand your environment, protect your network and assets, detect complex threats, prepare for security incidents, and much more. Therefore, the choice of a valid security partner to accompany you throughout this journey is business-critical.

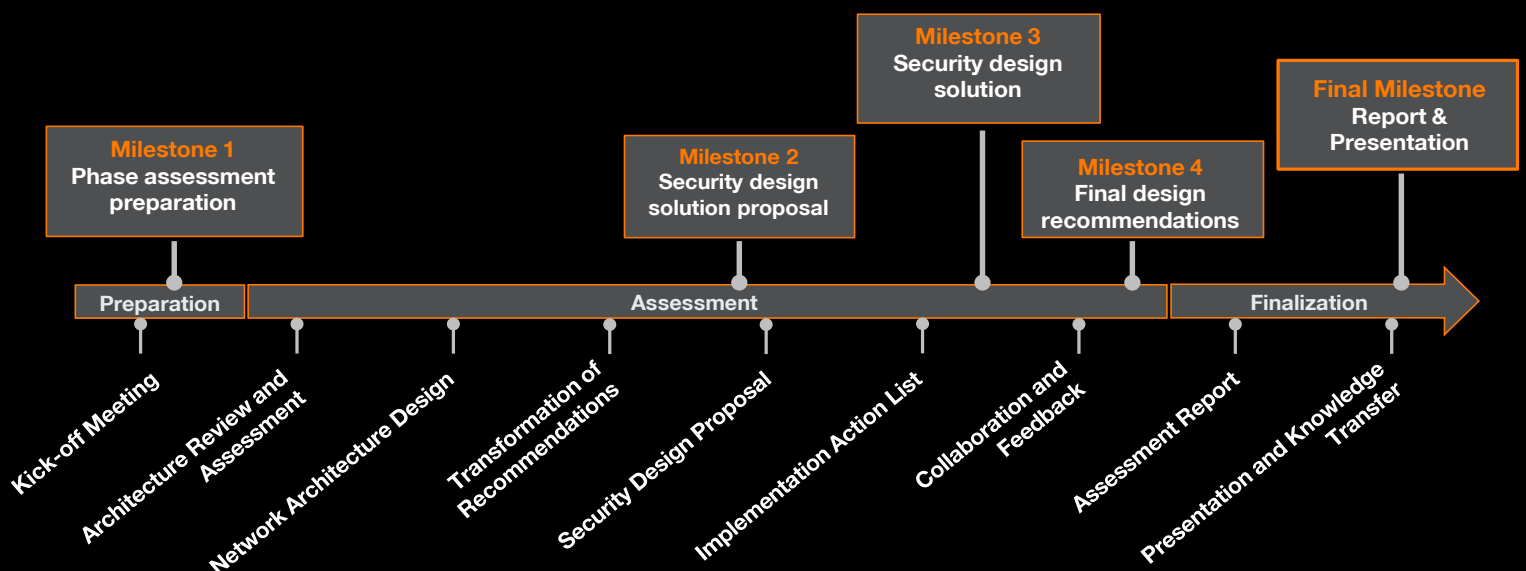

Let's secure the digital transformation of your business together! **With OT Security Assessment [Design], we provide you with a more resilient OT security architecture and design a more secure network for your OT environments.**

Our promise to you:

Let us design a secure OT network so you can embrace digital transformation with all its innovations.

A clear path towards a more resilient security architecture design

Key benefits at a glance

Increased OT Security

Transform identified security recommendations into concrete measures and solutions for an impeccable OT security.

Implementation Roadmap

Building of a roadmap that outlines prioritized actions based on urgency, feasibility, and potential impact for your business.

Increased maturity

Our assessment provides you with an evaluation of your OT security, vulnerabilities and potential risks.

Understand threat impacts

A detailed proposal with recommended security measures and solutions to gain insights for informed decisions.

How does it work?

- We schedule an initial kickoff meeting to understand your **goals and expectations**.
- We review your **OT security architecture**, vulnerabilities and potential attack surfaces.
- We help you **design a robust, secure OT network architecture** that incorporates industry best practices and standards.
- We identify **security recommendations** and we make sure they are translated into concrete and actionable measures.
- We provide you with an **assessment report**, explaining the secure network architecture design, solutions, and roadmap

Why should you consider it?

If you require:

- A **comprehensive assessment** to fortify your security against potential threats.
- **Pinpoint of risks** and **prioritization of strategic actions**.
- Enhancement of **IT/OT separation** and strengthening the security of your OT network.
- An **in-depth analysis of your current OT security posture**, complete with actionable recommendations for improvements.

Why Orange Cyberdefense?

Cybersecurity leader with global footprint and proven OT security expertise.

Dedicated OT security specialists and managed service delivery teams specialized in OT security.

A worldwide market presence allows us to support you wherever you are and at any given time.

Dedicated support on OT and IT security to help you increase your security maturity according to your business needs.

Cross-industry experience and know-how of industry standards, enhanced by strong partnerships with leading OT security vendors.

Orange Cyberdefense is a leading Managed Security Service Provider, recognized by Gartner in the OT Market Guide.
